BIOMETRICS VERIFICATION FEATURE USAGE GUIDELINES

OVERVIEW

The Biometrics Verification feature enables secure, patient identity verification through fingerprint authentication integrated with the **eKYC SDK** application.

This process eliminates the use of OTPs and enhances accuracy, patient safety, and compliance with national eKYC standards.

STEP 1: CONFIRM THE PREREQUISITES

Before using the biometrics feature, ensure the following:

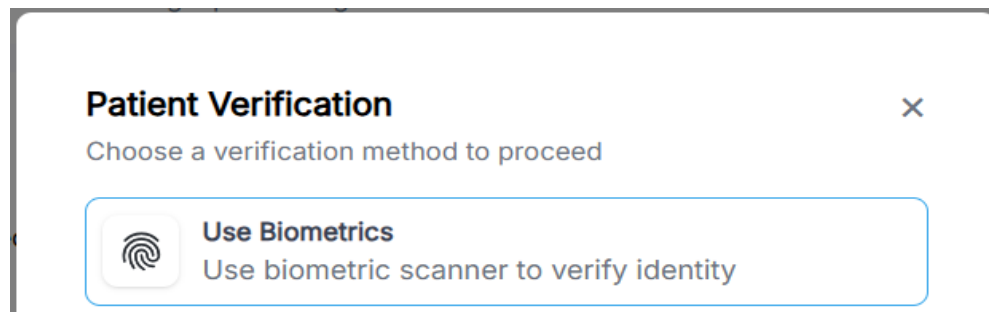

- The **eKYC SDK application** is pre-installed on the tablet.
- The tablet has an **active internet connection**.
- You have valid **eCitizen login credentials**.
- A **fingerprint scanner** is available and connected via USB or OTG.

STEP 2: SET UP THE BIOMETRIC DEVICE

1. Open the *eKYC SDK* app on your tablet.
2. Log in using your **eCitizen credentials** (username and password).
3. Detach the tablet from its keyboard entirely to avoid power or connection interference.
4. Plug in the fingerprint scanner. When prompted, grant the *eKYC SDK* app permission to access the scanner.
5. Within the *eKYC SDK* application, verify that the fingerprint scanner is successfully recognized and connected.

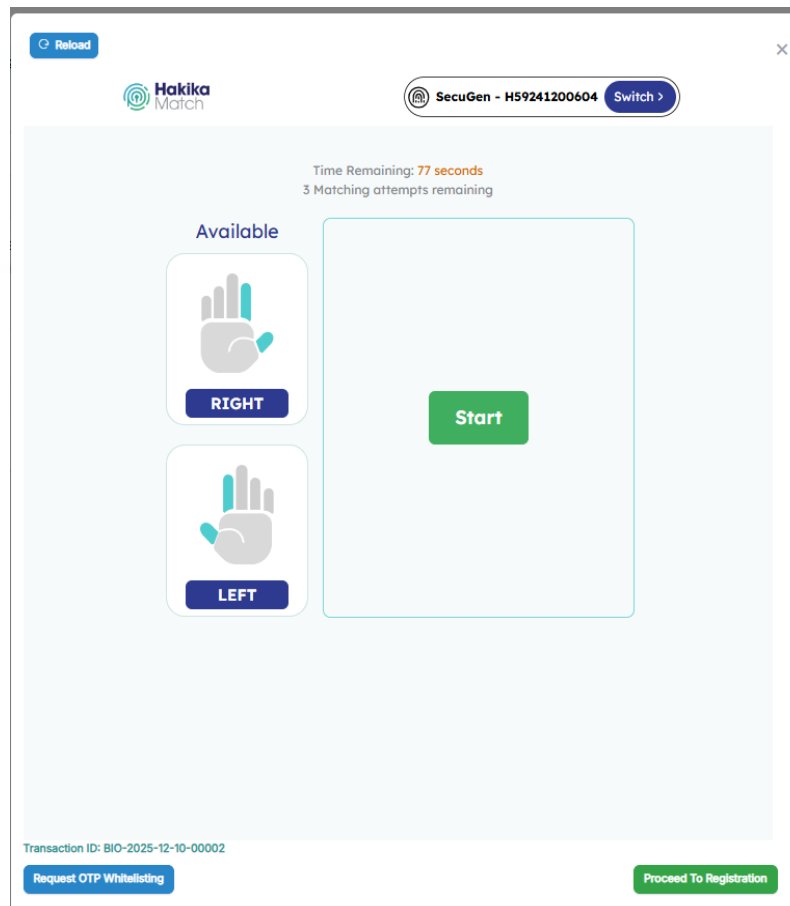

STEP 3: PERFORM BIOMETRIC VERIFICATION IN TIBERBU HMIS

1. Navigate to the standard *Patient CR Search* (Client Registration) workflow in Tiberbu HMIS.
2. You will now see the **“Use Biometrics”** option instead of the previous **OTP Verification** option.
 - a. You may also see the **“Send code to Phone”** and **“Override OTP”** options depending on whether the patient is excepted from biometrics verification or the entire facility is whitelisted.
 - b. Click **Use Biometrics** to start the biometric verification process.

3. Biometric Capture Interface:

- A window will open displaying two sets of palms labelled **LEFT** and **RIGHT**.
- Click **Start** to begin the scanning process.
- The message **“Ready to scan”** and an animation showing a finger on the scanner will appear.

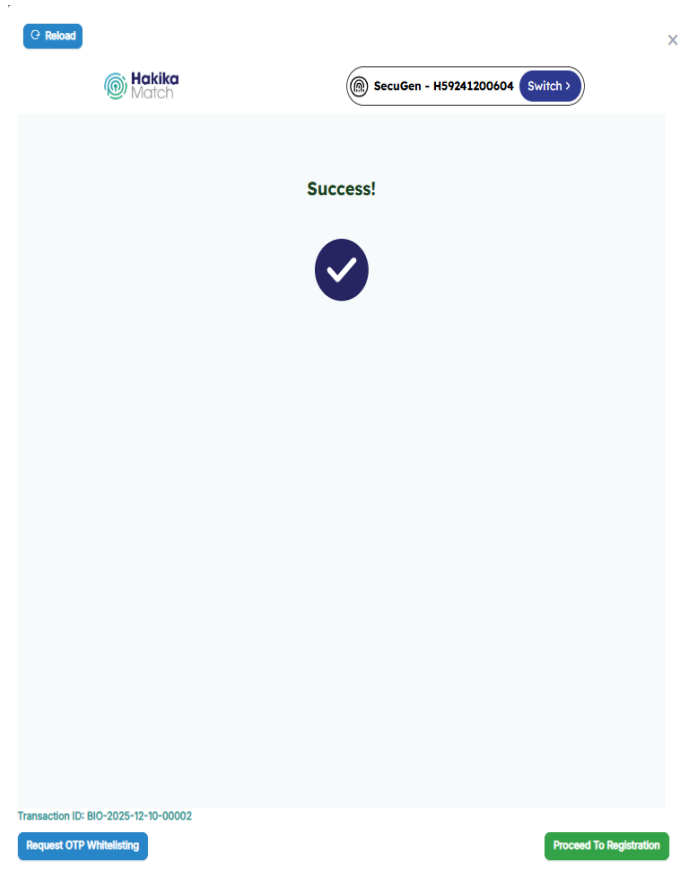

4. Capture Fingerprints:

- a. Ask the patient to place their finger firmly on the fingerprint scanner.
- b. Wait for the device to capture and match the fingerprints.

The screenshot shows the Hakika Match biometric verification interface. At the top left is a 'Reload' button. The header includes the Hakika Match logo and a device identifier 'SecuGen - H59241200604' with a 'Switch >' button. The main area is titled 'Processing' and contains the text 'Please wait as we verify the fingerprint'. Below this, it shows 'Time Remaining: 16 seconds' and '3 Matching attempts remaining'. On the left, under the heading 'Available', there are two hand icons: one for the 'RIGHT' hand and one for the 'LEFT' hand. To the right of these icons is a large rectangular area displaying a captured fingerprint. At the bottom left, the 'Transaction ID: BIO-2025-12-10-00002' is displayed. At the bottom right, there are two buttons: 'Request OTP Whitelisting' and 'Proceed To Registration'.

5. Verification Result:

- If successful, a message **“Success”** will appear on the screen. Click **Proceed To Registration** to continue to the **Patient Bio Page**, where you can proceed with patient registration or service provision.

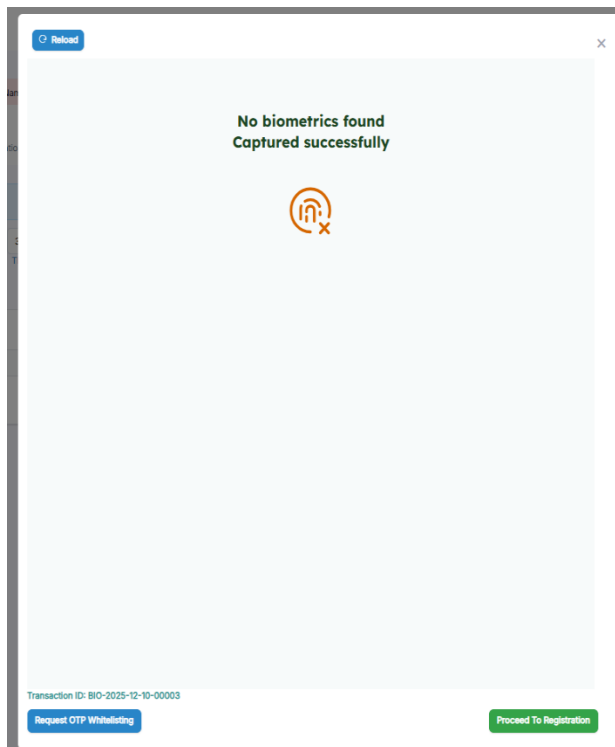

- If unsuccessful:

- No Biometrics Found.

This means that the verifying system does not have a sample of the patient's fingerprints to compare with. In this case the system will display the message:

Verification Failed! Fingerprint verification status is biometrics_not_found. Please use OTP instead. The system will then redirect the user back and make the OTP option available.

- No Match Please Try Again.

This means that a sample of the patient's fingerprints are available but the system is unable to successfully match them. In this case the system will display the message:

Verification Failed! Fingerprint verification status is no_match. Please request for OTP Whitelisting.

- Clicking Proceed to Registration with Zero Attempts

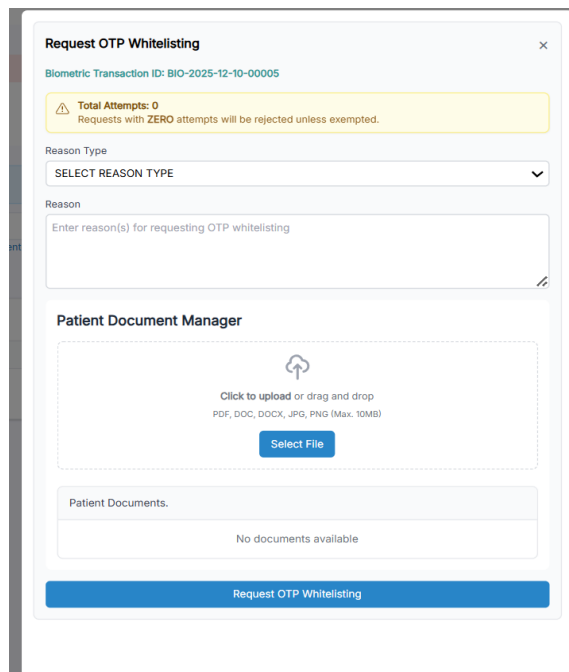

Verification Failed! Unable to verify. Please ensure you have attempted placing your finger correctly on the scanner.

OTP WHITELISTING FALLBACK (FOR EXCEPTIONAL CASES)

In specific cases where biometric verification is not possible (e.g., amputees, elderly patients, dialysis or oncology patients), follow the **OTP Whitelisting workflow** as defined in the fallback documentation.

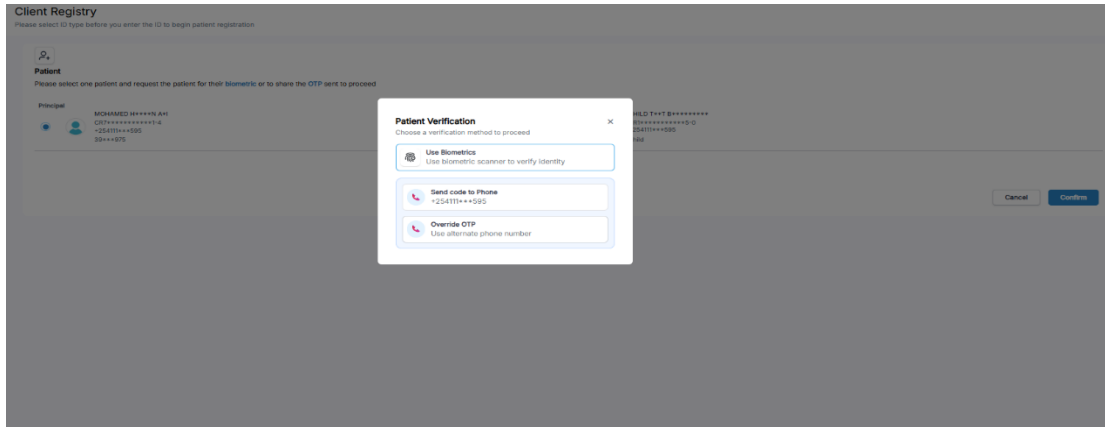

Request OTP Whitelisting.

- Please ensure that the patient has made all the **3 fingerprint attempts** before requesting for OTP Whitelisting. Requests with **0 attempts** shall be **rejected** unless from the exempted category.
- Select **Reason Type**, **Reason** and upload **Supporting Document(s)**.
- Make the request.

The screenshot shows a web form titled "Request OTP Whitelisting" with a close button (X) in the top right corner. Below the title, it displays "Biometric Transaction ID: BIO-2025-12-10-00005". A yellow warning box contains a triangle icon and the text: "Total Attempts: 0" and "Requests with ZERO attempts will be rejected unless exempted." Below this, there is a "Reason Type" dropdown menu currently showing "SELECT REASON TYPE". Underneath is a "Reason" text area with the placeholder "Enter reason(s) for requesting OTP whitelisting". The next section is the "Patient Document Manager", which includes a dashed box for file upload with the instruction "Click to upload or drag and drop" and supported file types "PDF, DOC, DOCX, JPG, PNG (Max. 10MB)". A "Select File" button is located below the upload area. Below the document manager is a "Patient Documents" section showing "No documents available". At the bottom of the form is a large blue button labeled "Request OTP Whitelisting".

- d. Once approved or rejected the outcome will be communicated via the registration page top section **“OTP Whitelisting Responses”**
- e. Click **“Verify Now”** to proceed with the appropriate patient.

Only authorized personnel can initiate OTP whitelisting, and appropriate documentation must be attached for audit and compliance purposes.

TROUBLESHOOTING TIPS

Issue	Possible Cause	Solution
Fingerprint scanner not detected	Device not connected or permission not granted	Reconnect the scanner and allow the eKYC SDK to access the device
“Ready to scan” not displayed	Scanner not initialized	Restart the eKYC SDK app and verify connection
Verification repeatedly fails	Poor finger placement or dirty sensor	Clean the sensor and ensure proper finger contact
OTP option missing	Biometric workflow is mandatory	Follow fallback guidelines only if authorized

SUPPORT

For assistance, contact your county system administrator or tibERbu support team through the official HMIS helpdesk. Include your **facility name**, **device ID**, and a brief description of the issue when raising a ticket.
